- When you buckle the belt, Sign (a) will show up immediately. There will be an auto test with an audio signal and the front LED will show the Sign(b). It will continue for a short period and change into Sign (c) when you wear the belt properly. If you don't wear the belt properly, Sign(b) with the audio signal will last till it is properly worn. Please adjust the fit by using the adjustment wheel to your own size and make sure the wearing direction is correct.
- The LED Display will show the time and battery level when you wear it properly. Please charge the battery when Sign (e) appears.
- Sign(g) means there is some problem with the device, please contact the customer service.
- After the airbag inflated, the SOS alarm (Sign h)will be displayed, and the associated APP will also receive the corresponding alarm.
- The Screen will be off after a while automatically to save energy. You could wake up the screen by putting your hand close to the screen.

CHARGING THE BATTERY

The device needs to be charged when the battery is low. It can be charged through the magnetic suction port. You could wake up the screen and check the battery level. The LED light (7) will indicate the battery level as follow:

- Solid green light means the device has enough power.
- Solid red light means low power.
- Flashing red light means the device needs charging immediately.

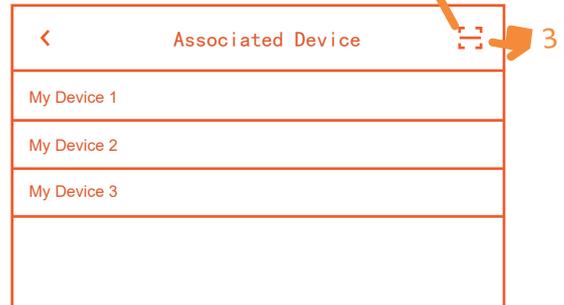

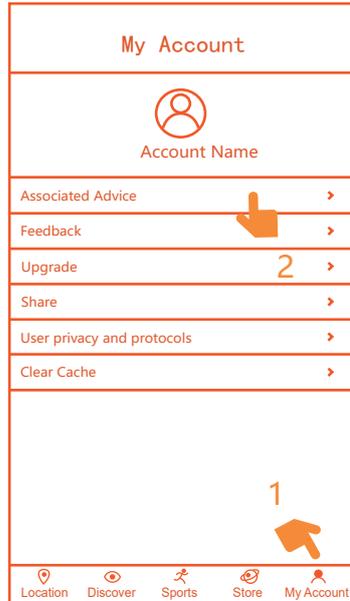

Internet Function

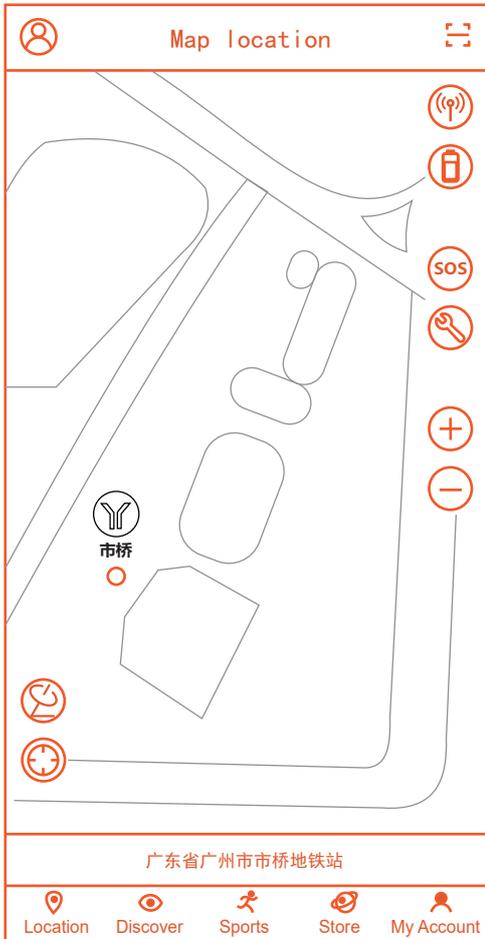

Scan the above QR code or download the S-AIRBAG APP in the APP Store directly. You could sign up with your information and follow the below steps to register your device so that your device could be tracked by the APP.

[My Account]-[Associated Device]-[Scan Code] to register your device.

SOS Alarm

After the device triggers an alarm, the associated APP will receive the device alarm, including alarm location. Associated family members can contact immediately or take rescue measures (this feature requires permission that this program keeps running in the backend of the

Malfunction Alarm

When there is a malfunction of the device, the mark will be displayed in red, and a fault message will pop up on the display screen.

Steps & Tracks

- Click [Sports] to view the step record of the day;
- Click [week / month] to switch the duration, you can view 7 days' track record
- Click [Sports]-[Track] to view the track record.

SOS Alarm

- When the wearer falls down, the airbag will be triggered to protect the user. The SOS alarm with buzzer beep will appear on the screen and the associated APP will pop up an alarm notice page simultaneously. In the meantime, the fall location and the optimal navigation route will be shown to the caregiver for immediate rescue.

AFTER INFLATION

After the device's airbag is deployed, it needs to be returned to the factory to replace consumables such as gas cylinders before it can be used again. Because compressed gas cylinders are special supporting parts for the device, and the airbags need to be folded and tested according to standard methods to be deployed normally when the protection is triggered, Please do not replace the gas cylinder or fold the airbag by yourself and reuse it;

MAINTENANCE

- Do not use S-AIRBAG HIP PROTECTOR if it is visibly damaged. If some damage occurs, please contact your retailer or our customer service team for further information.
- Do not disassemble the internal structure of the device by yourself, contact your retailer or our customer service after the airbag is deployed.
- Please use our original power adapter only and keep the device away from fire or other heat sources and sharp objects.
- Do not wear the device when you are bathing or sleeping.
- This device contains battery inside, please keep it separately with other items. Please fully charge the battery when it is not used for a long time.
- This device contains delicate parts and should be handled carefully. Keep out of reach of children.

DISCLAIMER

Dear user, please learn more about the products features before installation and usage, so that our products can work properly and give you protection.

- Please make sure that you wear our products properly as per the instructions of our user guide.
- Please note that no device can prevent death or serious injury in certain accidents. This device could only absorb shocks and offer the hip and pelvis more support, thus reducing the risk of hip fractures.
- The triggering protection of the airbag is based on the back or side fall of the wearer in a normal standing posture or walking state. But for other situations, such as holding the handrail to fall slowly when falling down or falling in a sitting or squatting position, the device may not deploy the airbag to protect because of its slow falling speed. Please be noted that if the front direction fall happens, the device will not deploy the airbag.
- For severe osteoporosis patients, fractures may occur even with a slight collision. Therefore, it is recommended to seek medical treatment to avoid the risk of injury.
- Please take proper protective measures during non-product wearing periods (including but not limited to anti-slip in the bathroom and protection of get up in night).
- When you are taking the transportation tools, the device cannot provide you effective protection. It is recommended not to wear any garment or backpack over the device.
- When you are engaged in intense sports such as running and dancing, please do not use this product because the built-in sensor of the product may detect that you are about to fall and deploy the airbag to protect. In addition, it is not recommended for people with implantable electronic medical devices such as cardiac pacemakers.

S-AIRBAG will be held in no way responsible for any bodily injury or death, and/or property damage that may occur whilst using any S-AIRBAG products improperly. Our device could only reduce the risk of hip fractures, but could not prevent death or serious injury during certain accidents.
